Project Summary

A Japanese-coded sci-fi fantasy mystery manga featuring original protagonist Mimi, with Astra and Nova as allies and Echo as the antagonist. The story follows betrayal, reincarnation into Aetheria, survival across hostile zones, recovery of corrupted fragments, and a final confrontation with Echo.

Volume 1: Scarlet Awakening

Chapter 1 — Deleted

Mimi is betrayed during the activation of a secret data-hub. Her consciousness is deleted from the real world and awakens in Aetheria inside the Scarlet Canyon. She learns she is trapped in a lethal digital world and survives her first encounter with a monster before Astra appears and intervenes.

Chapter 2 — First Signal

Astra explains the basic survival rules of Scarlet Canyon and shows Mimi how dangerous Aetheria is. Mimi touches a corrupted fragment and hears a distorted audio clue tied to her death. Nova appears, bringing chaos and momentum to the group. The three begin moving as a unit.

Chapter 3 — Nova Drop

Nova forces an abrupt but effective entry into the fight against incoming monsters. Mimi begins adapting quickly, and the trio starts forming a real combat rhythm. Mimi sees a broken real-world image inside a fragment and realizes the mystery reaches beyond the game world.

Chapter 4 — Trace Lock

Mimi discovers a hidden ruin and unlocks her first system ability, Trace Lock. A memory echo reveals the real-world shutdown sequence and a warning linked to Echo. The chapter ends with the team discovering that Echo protocol is active.

Chapter 5 — Red Arena

The team enters a major arena trial in Scarlet Canyon. Mimi begins to move from survival mode into leadership. A major battle reveals the canyon is being monitored, and the chapter ends with proof that the truth is being watched from outside the field.

Chapter 6 — Broken Armor

Astra's combat discipline is revealed more deeply as he fights with calm precision. Mimi watches and learns how to move in the zone without wasting motion. The team gains a route deeper into the canyon.

Chapter 7 — Fragment Noise

Mimi hears a stronger corrupted audio fragment from before her death. The voice suggests deletion, concealment, and an ongoing plan. Echo's influence is felt more directly for the first time.

Chapter 8 — Signal Hunt

The team tracks hidden signal traces through Scarlet Canyon. Nova's creative instincts help them find a concealed route, while Astra remains the stabilizer. Mimi begins to trust her own instincts more.

Chapter 9 — Arena Core

The trio reaches the Scarlet Canyon core and fights a powerful boss. The battle reveals a hidden monitoring layer and confirms the zone itself is part of a larger system. Mimi obtains a stronger clue about her original betrayal.

Chapter 10 — Exit Wound

The volume closes with Mimi discovering proof that the killer is still active in Aetheria. The trio survives the opening arc, but the truth is now undeniable: Mimi was erased for a reason, and someone is watching from deeper inside the system.

Volume 2: Verdant Labyrinth

Chapter 11 — Green Lock

The team enters a poisonous forest zone where the air itself is a trap. Mimi learns the new rules and realizes the world's logic keeps changing.

Chapter 12 — Breathing Codes

Survival in the labyrinth requires decoding environmental keys. Astra and Nova each contribute different strengths while Mimi begins understanding the zone as a living system.

Chapter 13 — Root Maze

The forest shifts, revealing hidden paths and false exits. The team is forced to move carefully or be lost in the labyrinth.

Chapter 14 — Nova Burn

Nova's aggressive style creates a breakthrough, but also risk. Mimi sees that Nova's chaos can be an advantage when used properly.

Chapter 15 — Living Signal

Mimi discovers that the forest stores memory traces inside living matter. The environment itself becomes part of the mystery.

Chapter 16 — Masked Bloom

An enemy hidden in the forest turns out to be part of the zone's own defense logic. The team barely escapes.

Chapter 17 — DNA Key

The team recovers a genetic access key that unlocks deeper layers of the labyrinth.

Chapter 18 — Poison Memory

Mimi sees a real-world betrayal fragment more clearly than before. The memory begins to connect specific voices and actions to the deleted event.

Chapter 19 — The Green Gate

The path to the next zone opens, but the cost of survival is higher than expected. The team must decide whether to push forward or recover.

Chapter 20 — False Harvest

Mimi discovers that someone has been planting false data inside her corrupted fragments. The mystery is no longer just about remembering — it is about who is editing the truth.

Volume 3: Echo Chamber

Chapter 21 — Glass City

The team enters a city of reflection and sound. The environment is beautiful but unstable.

Chapter 22 — Resonance Rules

Mimi learns that sound can wound, shield, and unlock pathways. The city's laws are based on frequency and precision.
